United States Data and Trends

Abortion Drop Continues

There are two basic sources on abortion incidence in the United States:

- The U.S. Centers for Disease Control (CDC) publishes yearly, but relies on voluntary reports from state health departments (and New York City, Washington, D.C.). It has been missing data from California, New Hampshire, and at least one other state since 1998.
- The Guttmacher Institute (GI) contacts abortion clinics directly for data but does not survey every year.
- Because it surveys clinics directly and includes data from all fifty states, most researchers believe Guttmacher’s numbers to be more reliable, though Guttmacher still believes it may miss some abortions.

Both the CDC and Guttmacher show significant recent drops and sustained declines over the last 25 years:

- Total abortions dropped 27.8% from 1998 to 2016 with the CDC, and fell 46.4% from 1990 to 2017 with GI.
- Total abortions fell below 1 million for the first time in the 2013 GI count and have continued downward to 862,320 in the most recent GI figures for 2017.
- The abortion rate for 2017 for GI was 13.5 abortions for every 1,000 women of reproductive age (15-44), less than half what it was in 1981 (29.3) and even lower that when abortion was legalized in the U.S. in 1973 (16.3).
- Guttmacher says there were 18.3 abortions for every 100 pregnancies ending in live birth or abortion in 2016, 18.4 for 2017, lower abortion ratios than any since 1972.
- Guttmacher says that the number of abortion “providers” has dropped from a high of 2,918 in 1982 to 1,587 in 2017.
- Most of the reduction in abortions seen between 2008 and 2017 occurred in facilities performing a thousand or more abortions a year. A loss of 122 such facilities from 2008 to 2017 was accompanied by a decline of 346,280 abortions, virtually all of the drop between those years.
- The percentage performed with chemical abortifacients like mifepristone rose from 16.4% in 2008 to 39.4% in 2017.

The Consequences of Roe v. Wade

61,628,584
Total abortions since 1973

Based on numbers reported by the Guttmacher Institute 1973-2017, with 3% added for GI estimated possible 5-5% undercount for 1973-2014. Another 12,000 per year added for 2015-2019 for abortions from “providers” GI says it may have missed in 2015-2017 counts.
